# BIO CLEANING SOLUTIONS

Bio Tech GTX 10 FF Concentrate Probiotic Animal Housing Cleaner & Sanitiser

Multi-Purpose Probiotic formulation concentrate

#### **IMPORTANT NOTICE**

Green Worx CS contends that this product is manufactured according to and conforms to the terms and conditions as stipulated in SABS/TC 1006/SC 02 "Detergents, soaps, cleaners, degreasers and oil spill dispersants and absorbents" including SANS CD 1604ED1.1:Biologically enhanced cleaning and degreasing products. Bio Tech has been accredited with SANS 1604 as of 2022.

**Bio Tech GTX 10 FF** is a probiotic consortium that demonstrates superior enzyme performance for use in multiple applications. It exhibits a broad range of degradation capabilities needed for a multi-purpose product efficacious in maintenance and cleaning of animal housing, drain line and improving septic and waste degradation and odour control making this product technologically the most advanced on the South African market.

In their natural environment, probiotics/bacteria produce hundreds

of enzymes in response to the organics present in their environment. They produce extracellular enzymes that break down proteins, starches, fats, oils, greases, urine, esters into smaller particles outside the bacterial cell. The bacteria then transport the smaller particles across their cell membrane for use as an energy source and for building of new cellular components. Since bacteria detect the organics present as potential food and produce specific enzymes to breakdown these organics, it is a very efficient system. Many different enzymes are required to completely breakdown a substrate.

The seven strain Probiotic consortium in *Bio Tech GTX 10* produces seven separate enzymes to ensure a swift degradation of key organic contaminants to ensure drain lines, grease traps, septic systems and surfaces are biologically cleaned and odours controlled. Although many bacteria can utilise these organics as food sources, it is the bacteria with the most rapid production of these enzymes that provide the most dramatic effects.

#### Safety of Bio Tech GTX 10 Consortium:

**Bio Tech GTX 10** contains a blend of safe probiotics/Bacillus microorganisms. Toxicity studies done by an independent laboratory shows that the consortium has no acute oral toxicity, no acute dermal toxicity, and no acute inhalation toxicity at maximal test dose. Acute dermal irritation and acute eye irritation studies classify **Bio Tech GTX 10** consortium as non-irritating, the consortium does not elicit a skin sensitisation reaction.

# **DATA SHEET**

#### Benefits

- Drain lines degrades and eliminates organics found in drain lines. Regular addition of *BIO TECH GTX 1* maintains a cleaner and odour-free system.
- Septic and waste treatment maintains effective activity in septic systems, eliminating the need for excessive pumping. Eliminates odours caused by incomplete digestion of malodorous volatile fatty acids.
- Hard Surface cleaning and odour control penetrates cracks, crevices and pores of surfaces where organics accumulate, removing the organics leaving a visually cleaner surface. Provides long term odour control by removing the organics that cause odours and prevents their return.

# **PRODUCT CHARACTERISTICS**

- Bacteria Counts : 1 X 10<sup>9</sup> /ml
- Bacteria Type : Bacterial Consortium:
  - : Bacillus cereus strain B002
    - : Bacillus cereus strain TS101
    - : Bacillus subtilis including strain D014

Bacillus consortium is designed to produce enzymes on demand: Active natural bacteria incorporated into the product produce the following waste degrading enzymes:

- Protease breaks down proteins (e.g. meat, excreted/secreted proteins) into amino acids
- Lipase breaks down fats/grease into fatty acids & glycerol. If not broken down, fats can go rancid and lead to off-odours and blocked drains/fat grease traps.
- Amylase starch acts as a glue for dirt amylases catalyse the break-down of starch into sugars which are then further used as a food source by the bacillus
- ✓ Cellulase breaks down cellulosic material
- ✓ Urease catalyzes the hydrolysis of urea into break-down products.
- Esterase splits esters into an acid and an alcohol in a chemical reaction with water called hydrolysis. Esters have characteristic odours most of which are pleasant/fruity, however can also include onion/garlic and worse odours
- ✓ **Xylanase** help in breaking down plant cell walls.
  - What this means the bacillus use the multitude of enzymes produced to break down the components of malodour and staining to provide microbial cleaning at the smallest level of dirt/contamination.
- Salmonella : Not detected
- Appearance : Clear liquid
- Fragrance : Pleasantly perfumed

#### Safety:

- Non-hazardous.
- Non-carcinogenic.
- Non-genetically modified.
- INon-pathogenic

#### Key Features:

- I Ingredients Readily Biodegradable (OECD 301)
- Biological active (contains active natural non-pathogenic bacteria)
- Compatible and enhances water treatment and water re-use systems
- Packaging minimized, re-useable and recyclable
- I
   Global Green Tag Certified
- Long lasting

### Dilution rates:

**Bio Tech GTX 10 FF** is diluted 1:9 to produce an effective ready to use product, blend with soft water under agitation. Shake before use as the biological spores may settle over time. No need to rinse, leave to air dry.

#### Features

- A stable consortium of safe Bacillus spores
- Production of multiple enzymes providing a wide range of degradation capabilities
- A synergistic blend that works in concert to provide superior performance across multiple applications
- Excretion of high levels of amylase, cellulase, lipase, protease, urease, esterase & xylanase enzymes
- Ability to work under aerobic and anaerobic conditions
- Single product simplicity for multi-application flexibility

### Other suitable applications for Bio Tech GTX 10 FF:

1. AGRICULTURE WASTE: reduction of high solids/crusting of waste: liquefaction and cleaning (i.e. cowsheds, piggeries, poultry farms etc.)

Area	Dilution	Initial Dose Rate	Regular Maintenance Rate	Method of Application
Buildings		1kg per 10 tons animal weight	Weekly for two weeks, then 500gm per week	Spray over surfaces
Floors	1:9	1kg / 120m <sup>2</sup>	1kg / 120m <sup>2</sup>	Spray over surface
Effluent Pits		1kg / 250 000 litres	Weekly	Spray over cone
Ponds & Slurry Tanks		1kg / 250 000 litres	Weekly	Spray over cone

# 2. SEWAGE / WASTE WATER PLANTS: general aid to processing.

Area	Dilution	Initial Dose Rate	Regular Maintenance Rate	Method of Application
Trickling filters	1:9	1kg / 4,5 million litres	500g / 4.5 million litres per week	Add to primary settling tank
Anaerobic digesters		500g / 45 000 litres	Repeat for 3 days then per week	Add to inflow pipe
Retention ponds		500g / 45 000 litres	Repeat for 3 days then per week	Add to inflow pipe
Activated sludge		500g / 45 000 litres	Repeat for 3 days then per week	Add to inflow pipe

### 3. ABATTOIRS: for easier handling of high protein/fats in concentrated areas

Area	Dilution	Initial Dose Rate	Regular Maintenance Rate	Method of Application
Total effluent	1:9	4kg / 450 000 litres per day	Repeat for 3 days, then ½ kg / 450 000 litres	Add manually
Grease traps	1:9	100g / 500 litres capacity	50g / 500 liters per week	Pour through drain

### 4. ANIMAL HOUSING: for easier handling of high dirt and grime in concentrated areas

Area	Dilution	Initial Dose Rate	Regular Maintenance Rate	Method of Application
Floors, Walls, Troughs, Drinking and feeding containers	1:9 to 1:19	100 ml per 900 ml water	To be applied at start of cycle	Spray with high pressure hose

**Bio Tech GTX 10 Concentrate** is designed as a bio-technical aid to treatment of organic waste material offering liquefaction and reduction of solids, reduction of odour, easier disposal of waste, aids general cleaning of soiled areas, safety in operation of effluent systems, offers a viable alternative to current processing techniques using a bio-technical approach.

Always maintain effective dosage.

- Usage considerations:
  - Control pH  $\sim$  7.00
  - Ensure that treatment system is properly mixed.
  - Ensure system has sufficient retention time for the waste load to be treated 10 20 minutes
  - Do not use non-biodegradable detergents or combine with chemical based detergents
  - Do not use anti-bacterial or biocidal (kill the good bacteria) products, as this will prevent the treatment from working.
  - Do not use any harsh chemicals such as strong acids or bases as this will kill the bacteria.
